

UNUSUALLY STRONG, WITH DEEP TROUGHS, AND NARROW PANS

PRODUCT DESCRIPTION & FEATURES

Fluteline® is an angular trapezoidal fluted profile sheet with similar characteristics to IBR but having an effective cover of 889mm.

- The general shape and appearance of the trapezoidal flutes ensures that Fluteline® is totally acceptable for use as roofing and as wall cladding.
- The deep and broad flutes of the Fluteline® sheeting ensure excellent drainage characteristics, which makes it an ideal sheet for roofing applications.
- Fluteline® offers optimum strength-to-weight performance and is designed to provide the most advantageous load/span characteristics of our trapezoidal profiles.
- Fluteline® can be factory cranked, curved and bullnosed to a wide range of radii. For further details refer to page 18 of this manual or contact the Safintra Technical Department.

LENGTHS & ROOF PITCH

Fluteline® sheeting can be ordered in any length, subject to transport limitations, up to 13,2m. Longer lengths require special transport arrangements.

When using Fluteline® sheeting the recommended minimum pitch for roof slopes in excess of 15m is 7.5° and for slopes less than 15m is 5°.
